international tables for crystallography volume f is an expert guide to macromolecular crystallography for the structural biologist it was commissioned by the international union of crystallography in recognition of the extraordinary contributions that knowledge of macromolecular structure has made and will make to the analysis of biological systems from enzyme catalysis to the workings of a whole cell the volume covers all stages of a crystallographic analysis from the preparation of recombinant proteins through crystallization diffraction data collection phase determination structure validation and structure analysis although the volume is written for experienced scientists it is recognized that the reader is more likely to be a biologist interested in structure than a classical crystallographer interested in biology thus there are chapters on the fundamentals history and current perspectives of macromolecular crystallography as well as on useful programs and databases such as the protein data bank each chapter is written by one or more internationally recognized experts this second edition features 19 new articles and many articles from the first edition have been revised the new articles cover topics such as standard definitions for quality indicators expression of membrane proteins protein engineering high throughput crystallography radiation damage merohedral twinning low resolution ab initio phasing robotic crystal loading whole cell x ray diffraction imaging and halogen interactions in biological crystal structures there are also new articles on relevant software including software for electron microscopy these enhancements will ensure that volume f continues to be a key reference for macromolecular crystallographers and structural biologists more information on the series can be found at [it iucr org](http://www.iucr.org)
